

# 2008 Solar Annual Review Meeting

**Session: Grid Integration/Inverter - SEGIS Solicitation**  
**Organization: Sandia National Laboratories**

**Ward Bower**

Sandia National Laboratories  
Albuquerque, NM, 87185-1110

[wibower@sandia.gov](mailto:wibower@sandia.gov)

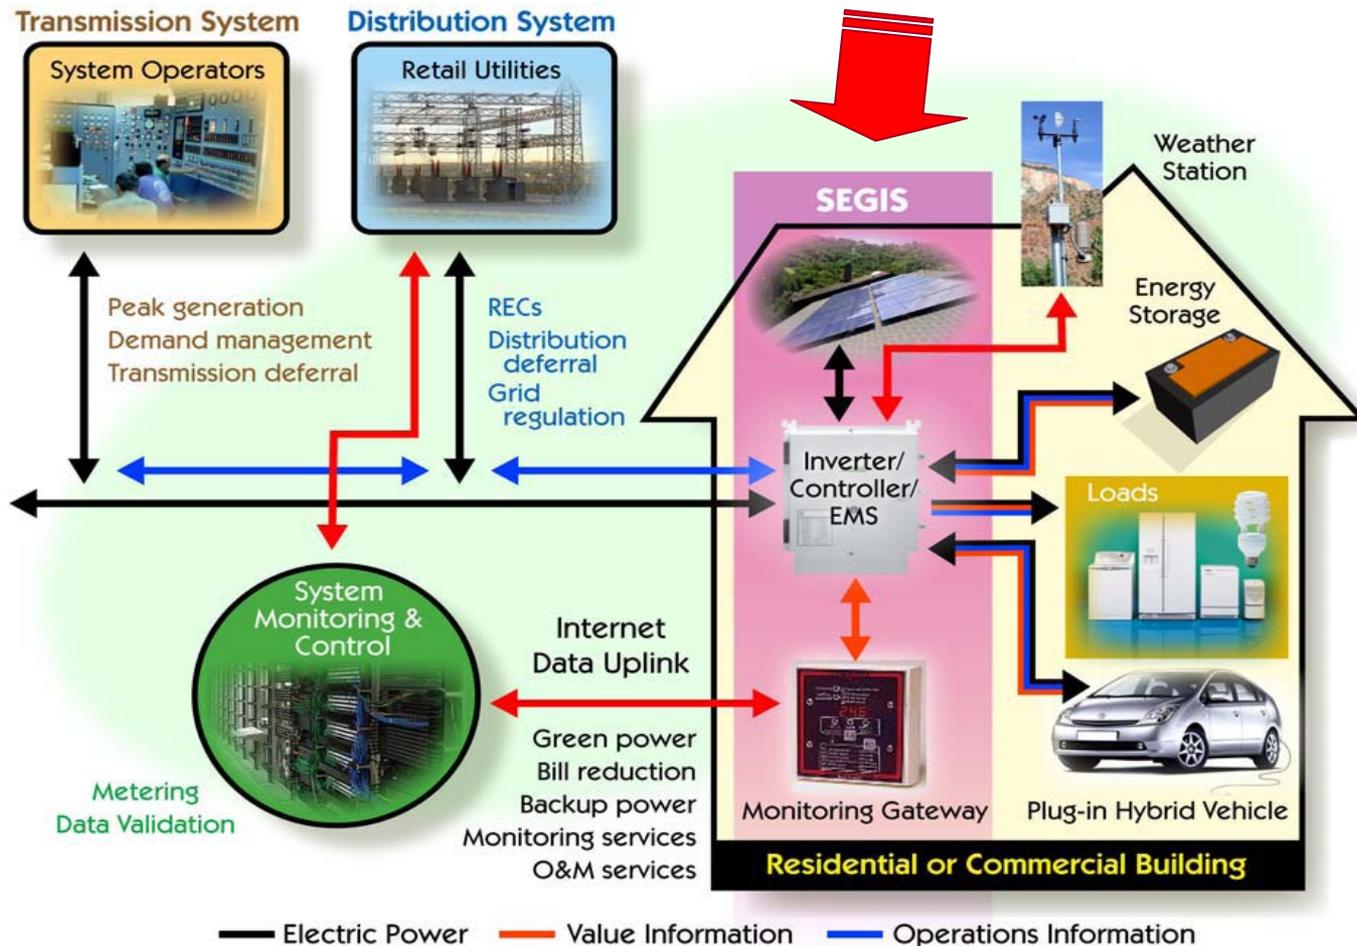

Ph: 505-844-5206

Austin Airport Marriott South  
Austin, TX April 22-24, 2008

**SEGIS**

# SEGIS IS THE HEART OF THE SYSTEM

# Solar Energy Grid Integration Systems Program (SEGIS)

## *OVERVIEW*

- **SEGIS is a 3-year effort and part of the SAI. Cost share contracts will be placed for Stage 1 (9-mo Concept), Stage 2 (1-year prototype development) & Stage 3 (1-year stage to advance toward commercialization)**
- **It is THE critical LINK in the upcoming Renewable System Interconnection (RSI) Program**
- **It focuses on ADVANCED R&D through industry (partners) for hardware AND methodologies that easily integrate PV and the utility grid to enable high penetration of PV systems.**
- **The solicitation is a collaboration between Sandia, the DOE, and industry/utility partners.**

# Relevance to the SAI

## The SEGIS R&D supports the SAI and Supplements TPPs

Recipient	Inverter work?	BOS?	System Controller	Energy Management?	Inverter and Energy Management (EM) Funding (\$)	Total \$ and Total % for Inverter + EM	Short Description of Inverter and Energy Management Related Work	Revolutionary (Leap Frog) Work?	Evolutionary Work?	Evolutionary Details	Proposed Syst Int?	Proposed Inverter Power Ratings	Proposed MTBF	Inv Mfg	BOS Mfg
Amonix	Y	Y	Y	NONE	\$48k = \$48k @ Amonix \$96k Proposal for inverter work seems to be dependent on another Xantrex Grant for Inverter Development.	Total = \$36.2M INV = 0.27%	Inverter, Field Wiring, Security, Integrate inverter, controls hydraulics into a single unit; Integrate communications for better tracking accuracy, Combine concentrator peak tracking with MPPT.	NONE SPECIFIED.	LIKELY Dependent upon Xantrex winning a different award. Plans to work with Xantrex to test new inverter design	Inverter Specs and goals basically parroted the final FOA goals	YES With mechanical tracker	30kW - 70kW	For inverter MTBF=3yr?	Xantrex	Amonix Design; JOL Enterprises f/wiring
Boeing	Y	Y	Y	NONE	\$1.1M with substantial cost share but with some that appears to predate any award.	Total = \$45.4M INV = 2.4%	Output capacitors in separate assembly (Note: input capacitors are more likely to fail) Advanced diagnostics in inverter. Modular inverter design to allow component field replacement Advanced switching design and remote monitoring.	NONE SPECIFIED Major breakthroughs in reliability, mfg, cost, inferred and not detailed	LIKELY: Work with PV Powered and SCE.	Basically searching for and using state-to-the-art components. Move to transformerless Cabinet and thermal management	YES Plans for modifying the Boeing plant for system designs	Initially dual 137 kVA in parallel 275kVA in 2006, Then to 375kVA in 2015. Noted confusion in the report	5, 10 to 20yr in 2015	PV	Boeing
BP Solar	Y	Y	Y	NONE	NONE from DOE; Cost share from Xantrex = \$840k	DOE = \$19.9M CS = \$21.1M Total = \$41.1M INV = 2.0%	Use of the HRII inverter deliverable with modifications. Independent Fat Spaniel communications to be added	NONE	NONE Xantrex subcontract to supply complete residential power conversion system; using a HRII deliverable	Design a new high-voltage charge controller for up to 600V	YES Remain monitor complete	150kW	5-10 years	BP Solar	and ASU
Dow Chemical	Y	Y	Y	NONE	Dow Building Solutions to Fund Fronius for next Gen. DOE = \$250k CS = \$250k Total = \$500k	Total = \$19.6M INV = 2.5%	New transformer-based inverter with higher eff, improved power harvest, easier installation, communications, enhanced serviceability. Details not provided. Modular inverter concept with up to 15 power stages. Details not provided. Includes power stages similar to existing and will need means to coordinate operation.	NONE SPECIFIED	NONE	Design a new high-voltage charge controller for up to 600V	YES BIPV inter proposed	150kW	5-10 years	Dow Chemical	Dow Building Solutions
GE	Y	Y	N	NOT SPECIFIC	DOE = \$ 1.6M to Xant CS = \$3.3M w/ Xant Total = 4.9M Costs @ GE part of Complex Task 5 with undetermined	Total = \$46.7M INV = 10.5%	Residential and commercial systems by of innov components, h very few de system	NONE SPECIFIED	Active Fault t use of	Technology st @ GE for new home construction discussed.	YES Vertical integration @ GE for new home construction discussed.	150kW	15-20y MTBF	Xantrex and GE	GE
GreenRay	Y	Y	N	NONE	Total = \$1.0 M Micro inverter	Total = 3 INV = 0%	Integration of PV Mod	NONE SPECIFIED	YES Quick connect modu to modu Wireless communications	Integration of short lived components Quick connect moving toward plug and play	YES Total AC Module integration	400W micro-inverter	30 yr but TBD with progress	GreenRay Final Mtg is Xantrex	GreenRay/Sanyo
Konarka	N	Y	N	NONE	Total = \$3.8M INV = 0%	Total = 3 INV = 0%	Residential and commercial systems by of innov components, h very few de system	NONE SPECIFIED	NONE for inverters or energy management	Staged Failure is offered as an option for optimization?	NO	N/A	N/A	N/A	??
MiaSole	Y	Y	N	NONE	Total = \$1.6M Residential and commercial systems by of innov components, h very few de system	Total = 3 INV = 0%	Residential and commercial systems by of innov components, h very few de system	NONE SPECIFIED	LIKELY; The mfg is just now producing its first U-I inverter. The learning curve will be difficult given the schedules.	Staged Failure is offered as an option for optimization?	YES Commercial and Res Proposed. Building integrated product proposed for PV in the roof	300W micro-inv 1500W res inv 100W micro-inv Panel Int dc-dc basic based mini 1500W detachable inverter	30 yr but TBD with progress	Exeltech for micro inv. Others included	Univ of CO for system management schemes
NanoSolar	Y	Y	N	NONE	Total = \$39.9M INV = 4%	Total = 3 INV = 0%	Concentrator System Integration with No inverter development or energy management work	NONE	NONE for inverters or energy management	NONE described for inverter	Minimal	Starting with 110kW going to 140kW	Not discussed	Conergy	SunLink and Sun Technics
Practical	N	Y	N	NONE	Total = \$9.8M INV = 0%	Total = 3 INV = 0%	Residential and Concentrator systems integration. Evolve GT inverter hardware with studies for capacitor temperatures and improvements in cost and performance	NONE	NONE for inverters or energy management	NONE described for inverter	YES but no discussion about inverter	N/A	N/A	None	
SunPower	Y	Y	N	NONE	\$2.0M	Total = \$42.5M INV = 4.7%	Dual inverter developments with PV Powered and Solectria. Generally for inverters >75kW	NONE SPECIFIED	LIKELY; The mfg is now producing the GT U-I inverter. The evolution was not specified.	NONE described for inverter; Couldn't find details about the inverter work for the concentrator system.	YES	4kW	10 now, 15 in 2015	Xantrex	
United Solar	Y	Y	N	NONE	Not found	Total = \$26.4M INV = 0%	Dual inverter developments with PV Powered and Solectria. Generally for inverters >75kW	NONE	LIKELY; No details found	NONE details found	NO	150kW PV Powered will develop inverters from 75-500kW Solectria will study optimization of inv for >100kW and the pros and cons of transformerless.	N/A	SatCon, PV Powered, Solectria, and SMA America	DEERs

BOS > 30% of TPP R&D

# Relevance to the SAI

The overall goals of the project. Develop technology to:

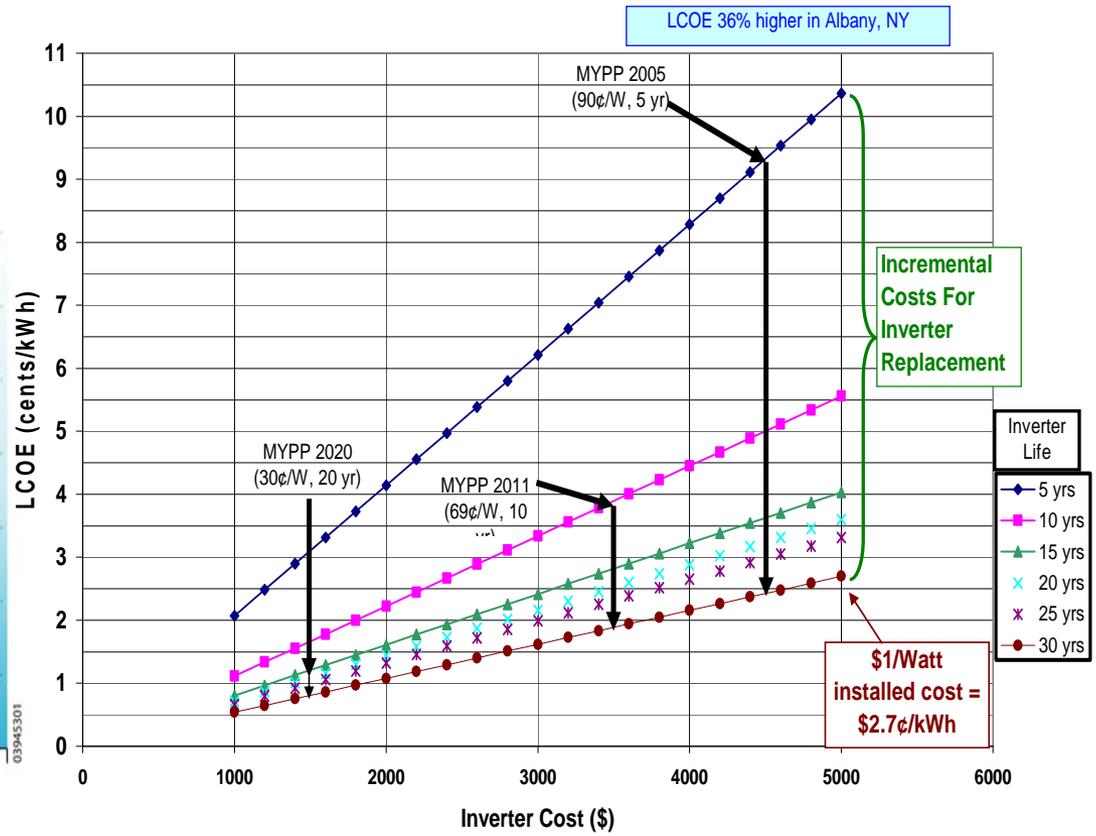

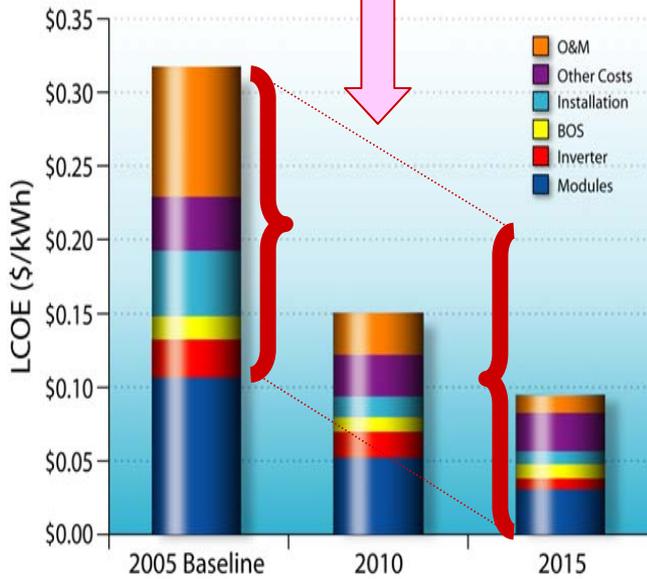

- **Include energy management systems and/or smart loads, energy storage, and the electric utility to advance the intelligent integration of relatively large amounts of PV energy while maintaining or increasing grid reliability**
- **Improve component and system reliability and increase values of PV inverter/controllers/BOS/EMS while addressing value-added interfaces for grid integration**
- **Improve PV systems and enable the dispatch of solar energy/energy storage to maximize value, reliability, and safety.**

# SAI Needs for SEGIS

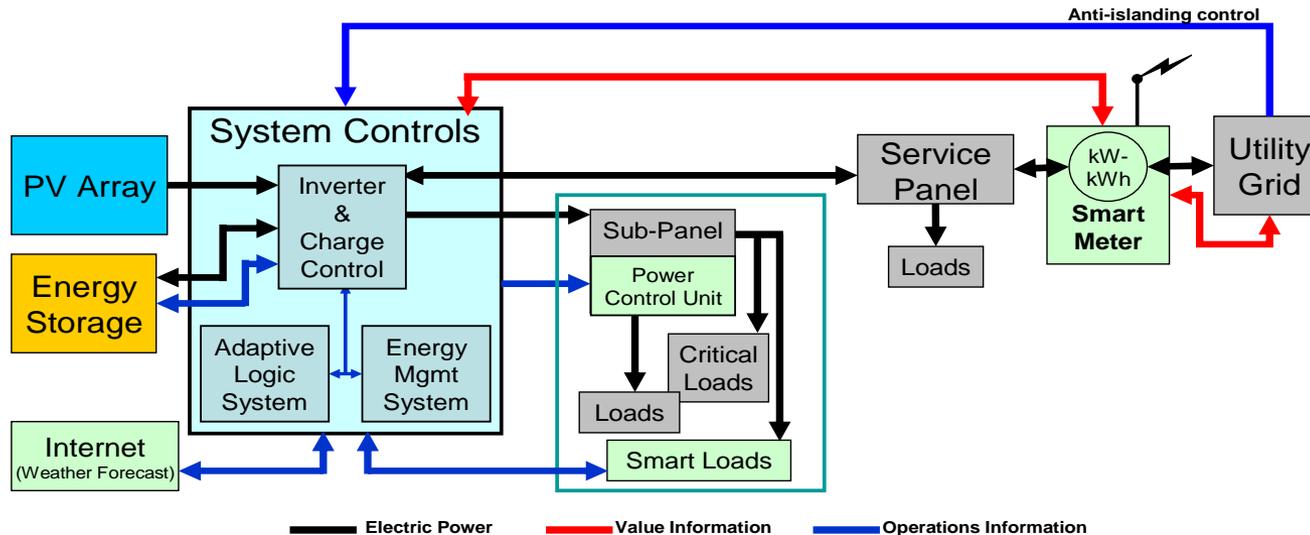

Contribution of 5 kW Inverter to LCOE - Phoenix

All Non-module costs must be reduced. Brackets show needed improvement

# Relevance to the SAI

The potential impacts of SEGIS go beyond SAI goals

- Expand the influence of PV to more than an intermittent and inflexible energy supplement
- Provide added value to owners, consumers and utilities
- Provide intelligent features for connection to future smart devices and intelligent grids
- Meet the LCOE and application goals of the SAI program

# The Budgets

The project budget includes 3 Stages over 3 years.

<b>Sandia National Laboratories SEGIS Solicitation</b>						
<b>Project Beginning Date</b>	<b>FY07 Budget</b>	<b>FY08 Budget</b>	<b>FY09 Budget</b>	<b>FY10 Budget</b>	<b>FY11 Budget</b>	<b>Total Budget</b>
<b>4/19/2007</b>	<b>\$0</b>	<b>\$ 3.0M</b>	<b>\$9.0M</b>	<b>\$10.0M</b>	<b>\$2.0M</b>	<b>\$ 24M</b>

Stage 1 capped at \$250k/contract

20% Cost Share (11-12)

Stage 2 capped at \$3M/contract

20% Cost Share (3-4)

Stage 3 capped at \$3M/contract

50% Cost Share (3-4)

# Project Specific Information

## Projected Work & Accomplishments (April '07 to March '08)

All work and accomplishments have been and are on target

<i>Milestone</i>	<i>Action</i>	<i>Accomplishments</i>
SEGIS Announcement Workshop	Completed April 19, 2007	More than 80 participants. General goals prioritized
SEGIS Technical Workshop/Reports	Completed May 9, 2007	More than 120 participants Detailed Goals prioritized
Funding Opportunity Announcement (FOA)	FOA nearly completed when project was assigned to SNL	DOE FOA efforts abandoned for new RFP
SEGIS Concept Paper	Completed October 2007	Provided SEGIS objectives and goals WRT "High Penetration"
SEGIS RFI	Completed October 30, 2007	Provided input and "Bidders List"
SNL/DOE Web Pages	Active November 2007	Provided program information
SEGIS RFP	Completed November 28, 2007	Provided proposal requirements
Proposals Received	Completed Feb 4, 2008	27 Proposals received
Proposals Evaluated	Completed Mar 20, 2008	Clarifications/financial continues

# Project Specific Information

## Projected Work & Accomplishments (April '08 to Sep '08)

<i>Milestone</i>	<i>Action</i>	<i>Accomplishments</i>
<b>Contracts Placed</b>	<b>Planned June 25, 2008</b>	<b>Stage 1 &amp; Stage 2 contracts with planned downsizing (Stage gate)</b>
<b>Kickoff Meetings</b>	<b>Planned July 2008</b>	<b><i>Validate SOW and Schedules</i></b>
<b>SNL/DOE Information Web Page with Prospectus</b>	<b>Planned July 2008</b>	<b><i>Public Informational Page</i></b>
<b>First "Quarterly Report" Reviews</b>	<b>Planned Sep 2008</b>	<b><i>Interim "Stage Gate" to be quarterly event</i></b>
<b>Provide SEGIS inputs for "Industry Advisory Group"</b>	<b>Planned Sep 2008</b>	<b><i>Industry Advisory Group to be active by Sep 30, 2008.</i></b>
<b>Planning activities for maximizing impacts in the RSI Program</b>	<b>Summer 2008</b>	<b><i>Provides updates and needs for the RSI program</i></b>
<b>Preparation for Transition to Stage 2</b>	<b>Fall 2008</b>	<b><i>Provides necessary contracting details and contingencies</i></b>

# Development of Futuristic, Integrated, Modular, Economical SEGIS System Components Prospectus Sample (XYZ Inc.)

## Technologies Addressed

Issues of high penetration, smart grid interactivity, cost reductions, system reliability improvements, safety and value added features

## Description

Delivery of a highly integrated, controller/inverter with scalable power of yy kW to zz kW, an intelligent control/communication master controller, and an EMS system for system energy management

## Resources (\$)

DOE Total	DOE Stage 1	Cost Share (total)
\$4,000K	\$200K	\$6,500K

## Innovation & Advances

## Participants

<b>Lead</b>	Power Electronics Center	USA Center for Dev
<b>XYZ Inc.</b>	Major Manufacturing Facility	Giant Industry Partners
<b>John Doe</b>	Utility Consortium Communication Developer	Your Electric Company Solar Telecom

**SEGIS**

# Looking Forward

- **Contractors (up to 12) will complete Stage 1 (conceptual) in March/April 2009.**
  - **The SEGIS R&D activities are critical to a successful SAI program and there is no need to modify the AOP and existing plans. The SEGIS program is also scheduled to become a critical effort in the planned Renewable Systems Integration Initiative.**
  - **One positive outcome is that a number of very innovative developments will be further funded (DOE/VC) to fruition**
- **Stage 2 downsizing selections (3-4) will be based upon accomplishments, likelihood of success for advancing PV system values and the impacts on the nation's PV and renewable energy resources**
- **Stage 3 continuation will be based upon accomplishments, commercialization advances, and the overall value of the development.**
- **All progress of all stages will be posted on related web pages.**

# The SEGIS Program

Thank You
